Solving your European Regulatory Challenges

Biocides

The EU's legislation for biocidal products is constantly changing and developing. The different implementations and derogations make achieving an approval challenging. That's where LKC helps. We specialise in supporting clients to reach active substance approval and biocidal product authorisation. Our proven track record shows how we have helped active substance and product manufacturers to successfully market the tools for professional and non-professional pest control within Europe. Our team of regulatory and technical specialists have valuable and essential knowledge gained during the evolution of biocides legislation. Our regulatory project managers are skilled in understanding your needs, delivering outcomes on time and within budget.

Crop Protection

LKC provides technical and regulatory expertise to steer you through the process of getting your active substances and products approved within Europe. Crop protection regulations are strict and authorization requirements are stringent. For the past 20 years, we've built strong relationships with clients and European regulators, so we can help your compounds gain approval in the EU. Our scientific knowledge ensures that your products are manufactured in compliance with regulations to ensure your products safely control pest organisms and protect human and animal health.

Veterinary Medicines

If you are a global company looking to market your veterinary medicinal products within Europe, we're here to help. The regulatory process is stringent and can be lengthy, with EU regulations prone to changes. To make the process faster and more likely to succeed, use a European based consultancy. At LKC we help companies in the pharmaceutical and specialty chemical sectors to achieve product approval for sales in Europe, by providing a dossier preparation and risk assessment service for you to submit yourselves. We can also act as your point of contact with the European and National Competent authorities, managing the regulatory procedure on your behalf. Having worked with the EU regulatory authorities for many years, we understand the process, knowing the best route to use for your application.

Chemicals and REACH

With the increasingly stringent regulatory controls on chemicals, registering your active substance for import into and use in the EU takes expert help to navigate the strict procedures. Acting as independent consultants on behalf of global chemical companies, LKC has worked with regulators and European organisations for over 20 years. That experience gives us the insider knowledge and expertise to assist your organisation into the EU. Needing to achieve compliance with REACH Regulation for your substances, LKC has the technical knowledge to ensure you do that. We can carry out GLP and GEP study monitoring according to the OECD test guidelines for chemical safety.
